

Transformyx

A *different* kind of IT

Cloud-based VoIP Telephony for Business

For years, the best phone systems were a luxury enjoyed only by the largest companies and institutions. Now, the best PBX features are accessible to small- and medium-sized businesses like your own. *Transformyx* systems are flexible, professional, portable, and scalable.

Flexible

Transformyx's web-based platform allows you to customize your own phone system. Our technology places all of the power at your fingertips. Need a new extension? Takes about 5 seconds. Need a new voicemail box? Different hold music? Changing a ring group? Easy. Do it yourself, or call us, and we'll do it for you.

Professional

When a customer calls your office, you can't afford to look unprofessional. A *Transformyx* system will help you portray to your clients the professional image you deserve. *Transformyx's* Auto-Attendant feature routes calls directly where they need to go. Your customers will never get a busy signal again. Instead, your *Transformyx* vPBX™ allows all handsets in your office to be in use simultaneously, with unlimited lines.

Portable

Are you considering moving offices? Unlike the mess of wires fastened to the wall of your telecommunications closet, your *Transformyx* Smart PBX™ can easily be transported wherever you go. Because our systems utilize existing office infrastructure, the transition is easy.

Scalable

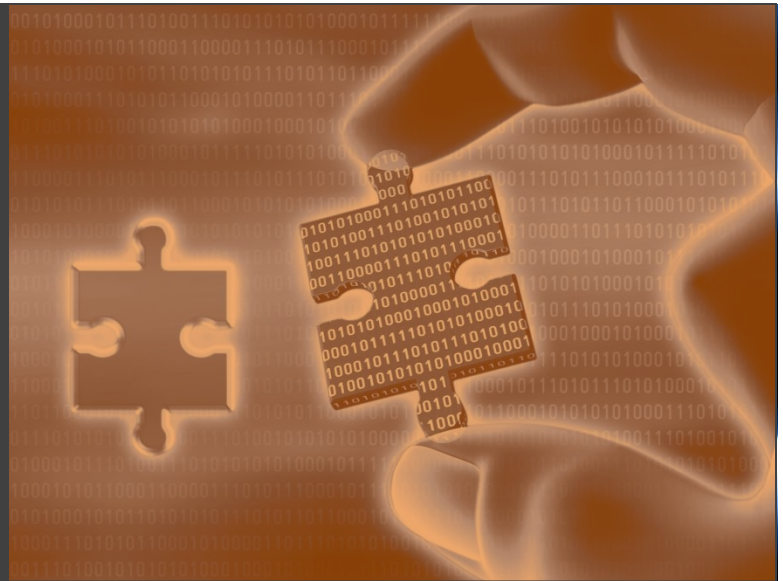

Adding new lines to your *Jive* system is as easy as buying a new telephone and telling us you have it. There are no extra hardware or "connection" charges. This way, you pay only for capacity you need.
